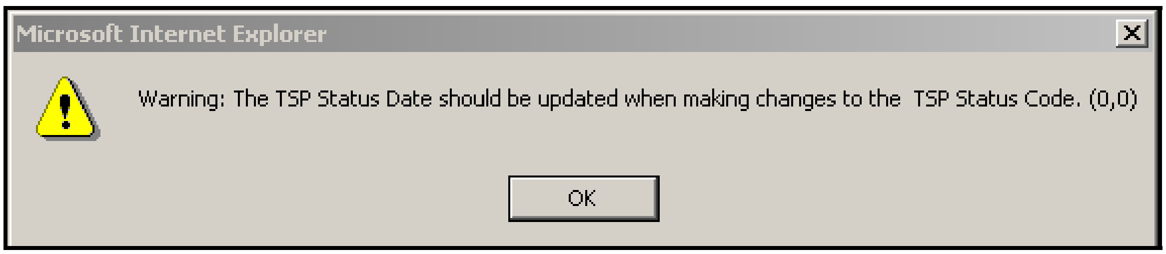
Release Notes 1.3.2

7/15/02

The following items have been moved (migrated) to Production for use by Agencies beginning on July 15, 2002.

- A new warning message was added to the Savings Plan page. When a user modifies the TSP Status Code but does not modify the status date, the following message will appear when the page is saved.



- The Position Filled By field is now required upon saving a hire action. The user will not be able to save the action until the field has been populated. If a filling position value is not applicable for the particular action being processed, the user should select, Not Applicable from the drop down list. This field is located on the Filling Position sub-page by accessing the Filling Position Data hyperlink on the Employment 1 page of the Administer Workforce page group.

- Workflow functionality for returning an action back to the requester was moved to Production. The action can now be returned to the requester for more information. Any role in the workflow process can return the action to the requester. Upon returning the action to the requester, it will appear in the requester's worklist and can be re-routed after the additional information is entered.

- The Bargaining Unit field and Comp Area/Level will now default from the Position Data pages to the Administer Workforce, Employment 2 page when a position change occurs. Which is to say that the Bargaining Unit and Comp Area/Level will not populate for an employee occupying the same position prior to this fix being moved.

- The Advanced Search is now the default for all Administer Workforce employee search pages. This broadens the search by providing the following items to search with; Employee ID, Employee Record number, Name and Last Name.

- The 37R salary table changes effective 7/14/02 was migrated to Production.

- Two payroll interface updates were completed. A fix for city taxes was migrated. This will fix the issue of the exemption of "10" being picked up by payroll. The employee's address is now being passed for thrift transactions.
    - **PROCESSING REMINDER**: Please continue to process these items normally. No change in processing is required by the user

- Agency Super Users, Agency Power Users and Agency Security/Workflow Administrators now have view-only access to their Agency Department Trees by navigating through the following menu path: Home > Peopletools > Tree Manager > Use Tree Viewer.

- User can now print SF-52's for all accessions regardless of the WIP status the action is in. So now if an accession is in "INI" status a 52 can be printed.

- The users can now do a correction (002) when the cancellation action is the most recent action.
